Data Science graduate from Sumatera Institute of Technology with hands-on experience in SQL, Tableau, and Looker Studio, building dashboards and turning data into insights, from retail profitability to BPS population statistics. Experienced in data validation through an internship at BPS and SQL as a practicum assistant. Seeking a Data Analyst to support data-driven decision making.

WORK EXPERIENCE

Sumatera Institute of Technology **February 2025 - May 2025**

Database Technology Practicum Assistant

- Assisted in delivering database technology laboratory sessions for 30+ undergraduate students alongside a team of five teaching assistants.
- Guided students in implementing database concepts, including SQL, PostgreSQL, query processing, and database technologies using Java, Python, DBeaver, QGIS, etc.
- Collaborated with lecturers and fellow teaching assistants to ensure smooth laboratory sessions and achievement of course learning objectives.

Central Bureau of Statistics of Bandar Lampung City **July 2024 - August 2024**

Data Analyst Intern - Technical Division

- Processed, validated, and cross-checked statistical datasets to ensure data accuracy for official publications.
- Contributed as a Data Processor to the preparation of six official publications from the 2023 Agricultural Census (Phase II) covering livestock, food crops, forestry, horticulture, plantations, and fisheries.
- Designed statistical infographics using Canva to communicate census findings in a clear and engaging format.

EDUCATION

Sumatera Institute of Technology - *Lampung* **August 2021 - September 2026**

Bachelor of Data Science

Bachelor Thesis: https://repo.itera.ac.id/depan/submission/SB2609150022

Malaria Classification in Blood Cell Images using Vision Transformer (ViT) and Cross-Attention Multi-Scale Vision Transformer (CrossViT)

PROJECT

Sales Analytics Dashboard: Profitability and Sales Performance Analysis using Tableau

- Built an interactive Tableau dashboard on 5,111 retail orders ($1.12M sales, $106.9K profit) with KPI cards, regional map, monthly sales-profit trend, and filters by region, segment, ship mode, and month.
- Validated data quality (0 duplicates, 0 missing values) and analyzed profit by category, sub-category, and state, revealing that Furniture generates 57% of sales but only a 2.8% margin, driven by loss-making Tables (-8.2%) and Bookcases (-3.4%).
- Identified Central as the weakest region (3.9% margin vs. 9.9-11.6% elsewhere) and recommended pricing review and logistics audit for loss-making states such as Texas and Illinois.

Malaria Classification in Blood Cell Images using Vision Transformer (ViT) with Particle Swarm Optimization (PSO) Hyperparameter Tuning

- Fine-tuned a pre-trained Vision Transformer (ViT-Base) on 27,558 red blood cell images using a stratified 80/10/10 split, data augmentation, and early stopping to classify Parasitized vs. Uninfected cells.
- Benchmarked four manual optimizer, learning rate, and batch size configurations (best: 97.71% test accuracy), then ran PSO (25 trials) to tune learning rate and batch size.

- Achieved 97.97% test accuracy with 97.3% recall on parasitized cells; PSO independently converged to the same region as the best manual setting, validating the baseline.

Population Dashboard of Bandar Lampung by Sub-district and Sex (2023) using Google Looker Studio

- Built an interactive Looker Studio dashboard from BPS 2023 population data across 20 sub-districts (about 1.1M residents), featuring a sub-district selector, top-10 male/female bar charts, and a bubble map of total population.
- Validated the source table and flagged a 270-resident inconsistency in Langkapura (male + female ≠ published total), documenting it instead of silently adjusting the data.
- Found that the five largest sub-districts hold 33.6% of residents (Kemiling is 3.4x larger than Enggal) and that the sex ratio is balanced at 102 men per 100 women, with Enggal as the only sub-district with more women.

Uber Trip Data Analysis using SQL (Google BigQuery)

- Analyzed 1,140 trips from a 2016 personal Uber trip log in Google BigQuery using SQL (CTEs, window functions, QUALIFY, PERCENTILE_CONT), after removing duplicates and excluding 4 zero-duration trips from speed metrics.
- Profiled trip patterns by category and day type and identified demand peaks: 93% of trips are Business, weekday demand peaks at 13:00 and weekend demand at 18:00, with Friday holding the two busiest day-hour slots.
- Built a speed-based trip efficiency classification and found that 28% of trips are slow (<25 km/h), but 59.6% of trips under 5 km are slow vs. 14.2% of longer trips, showing low speed reflects short hops rather than congestion.

ORGANISATIONAL EXPERIENCE

HMSD Adyatama ITERA 2024 **February 2024 - February 2025**

Head of Interest and Talent Management Division

- Led a team of 8 members in planning and executing five student development programs focused on sports and arts.
- Coordinated the department's flagship sports and arts competition, strengthening student engagement and collaboration within the Data Science program.
- Contributed to the faculty's achievement of 1st Overall Champion in the Faculty of Science Sports Competition and 3rd Place in the ITERA Band Competition.

Lancang Kuning ITERA 2023 **March 2023 - December 2023**

Head Of External Department

- Coordinated communication and collaboration with internal and external student organizations.
- Managed organizational correspondence and represented the organization in partnership and networking activities.

CERTIFICATION

- **Data Analyst - DQLab x Digital Talent Scholarship | Credential ID 21212009840-193**
- **Data Scientist - Digital Talent Scholarship | Credential ID 21211995840-464**
- **SQL - HackerRank | Credential ID 9377A8B55EC4**
- **Excel Data Analysis - Microsoft**

SKILLS

Data Analysis & Visualization	**:**	Tableau, Google Looker Studio, Microsoft Excel, Canva
Database & Query	**:**	SQL (BigQuery, PostgreSQL), DBeaver
Programming & Libraries	**:**	Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-Learn), R
Machine Learning	**:**	PyTorch, TensorFlow, Keras, Hugging Face Transformers, NLTK
Analytical Methods	**:**	Data Cleaning & Validation, Exploratory Data Analysis, KPI & Descriptive Analysis, Dashboard Design
